EDUCATION

SINGAPORE MANAGEMENT UNIVERSITY

Aug 2024 - May 2028

Bachelor of Business Management (Penultimate)

- Grade: 3.85/4.00 (Summa Cum Laude)
- Achievements and competitions:
 - Dean's List 24/25; Dean's List 25/26
 - 2025: Ellipsis Tech Series Hackathon; Ho Bee Land – SMU Sustainability Business Case Challenge
 - 2026: APAC Art x Tech Hackathon: Best Digital Canvas; BungleRock Rockathon; Daytona HackSprint; Garena AI Builders Challenge

WORK EXPERIENCE

SPARK by CIO Academy Asia Pte Ltd

May 2026 - Present

Project Consultancy; AI Advisory Intern

- Executed onsite events.
- Consulted internal issues from colleagues and generated agentic workflows individualized to their work scope.

ZENITANT PTE LTD

Oct 2023 - Present

Coding and AI Trainer

- Taught basic key AI, coding using Microbit, M5GO and Python to over 20 classes of secondary students with 100% pass rate.

RELEVANT PROJECTS

NEXUS · B2B Wisdom Exchange Marketplace

Founder-engineer; Sole Developer

- Built the full platform: Supabase backend (auth, row-level security, realtime messaging, storage, admin review flows), two-sided matching and engagement flows, invite and curation system.
- Shipped two production AI agents on the Claude API: structured skills extraction from free text and resume PDF/DOCX uploads, and a conversational agent that profiles experts and ranks live briefs into the matching engine.
- Took the product native with a hardened Capacitor iOS/Android shell: deep links, offline fallback, safe-area system, haptics, back/edge-swipe navigation, Play Store signing runbook.
- Designed and enforced a house design system (single accent, token ramp, liquid-glass mobile chrome with real SVG-displacement refraction); trimmed the icon subset 76 → 14 glyphs (~19 KB).
- Ran whole-branch security reviews that caught real RLS and anonymity leaks before merge.

BENTO BOX · Desktop Media & Productivity Suite

Sole Developer

- Built a 13-tool Electron + Next.js monorepo: media conversion (HEIC, resize, PDF, video, splice), transcription, QR, slide slicer, background-removal cutout, AI headshot studio with Google OAuth, card/certificate designer, and a custom canvas editor.
- Cut 27 tagged releases with CI-built macOS and Windows artifacts; SQLite migration system; cross-tool run-history backed by a shared store.
- Scaffolded the iOS companion (Capacitor) with a LAN standalone-server mode.

EVENT DRAFTER · Event Invitation Ops Platform

Sole developer

- Next.js + Electron desktop app (Windows/macOS) with a background send worker: adjustable rate limiter, stranded-send recovery, safety stop, live status and offline indicators.
- Per-invite logistics toggles driving three AI draft modes for targeted follow-ups; template system with migrations.
- Diagnosed a packaging failure where Turbopack's hashed native-module symlink broke every page in the shipped app; fixed it and wrote the operator guide that non-technical staff run it from.

SKILLS

Languages

TypeScript/JavaScript, SQL, HTML/CSS, Python (working)

Frontend

React, Next.js, Astro, design systems, motion and interaction design, accessibility (keyboard/AT, WCAG contrast)

Native

Electron (packaging, release pipelines, native modules), Capacitor (iOS/Android)

Backend

Supabase/Postgres (RLS, realtime, storage, migrations), SQLite, Node API routes, rate limiting, bot/webhook infra

AI

Claude API (structured outputs, agents, document extraction), MCP servers and bridges

Ops

GitHub Actions release CI, Vercel, TDD, whole-branch code review, security hardening
